

# Getting Started With a New Invention Idea

If you have an idea for a new invention, then you need to know the steps to take in order to protect it. This includes looking for a patent expert, conducting a patent search, and creating a prototype. These steps will help you protect your [invention idea](#) and begin to make money immediately.

## Steps to get started with a new invention idea

Developing an innovative invention idea into a new product can be a financially rewarding endeavor. However, the work involved is often overlooked by those who have never created a product before. As such, it is critical to know the steps to follow when pursuing this venture. Here are a few tips to ensure your success.

The first step in pursuing an invention idea is to sketch it out. Write down your idea in an inventor's journal and try to sketch it out. After you're happy with your concept, make a functional prototype of your idea. You can use cardboard, paper, or even a 3D model. You can also work with a 3D printing company or a manufacturer to make a professional prototype.

## Finding a patent expert

If you are looking to bring your new [InventHelp](#) to market, you should seek professional help to ensure that the process is as smooth as possible. Professional assistance can include locating a manufacturer, finding a patent attorney, or pursuing business partners. Incubators can also be beneficial, as they offer a supportive environment and tools to help inventors succeed.

The first step is to ensure that your invention works before seeking a patent. To this end, you may want to create a prototype. While you don't necessarily need a complete prototype, it can help to get a better understanding of your product before filing for a patent.

## Conducting a patent search

A patent search can help you find other similar [Invent Help](#), especially if you are not sure what class your invention belongs to. You can use prior art and patents as a starting point. Similarly, a search for similar publications may help you find patents that are similar to your idea.

You can also conduct a patent search using the keywords or phrases associated with your idea. To find relevant patents, you can use internet search engines, encyclopedias, magazines, trade journals, and scientific publications. You may also be able to find patent references for objects that you are already familiar with, such as cell phones and computers. Additionally, patents for products from market leaders can be useful.

## Creating a prototype

Prototypes are the first working versions of your invention idea. They are a useful tool for marketing, pre-selling, and raising financing. It also enables you to work out any kinks before making the final product. Depending on the complexity of your invention, you may need to make several prototypes. The quality of your prototype should be high to reduce the number of revisions required from the manufacturer.

Prototypes are the best way to test a new invention idea. It allows you to test the usability of your invention before going through the patent process. They also allow you to determine if your idea has a market. You can show it to potential consumers and ask them for their feedback.

## Creating a sell sheet

Creating a sell sheet is an important step when you are introducing your new invention to the public. This document should contain the most important details about your product and provide contact information for prospective buyers. It also should list additional products that might appeal to the same audience. In the end, your sell sheet will help you get your invention noticed.

The sell sheet should be well written and contain a strong call to action. A successful sell sheet should contain images that show the ideal use of the product. It should also include images of how the product is packaged and how it can be installed. It should also contain some text to explain the benefits of your product and to drive home the concept.

## Finding funding

If you have an innovative invention idea and would like to see it become a reality, you can consider finding funding for your new venture. There are various funding options available, including angel and venture capitalist investments. These investors provide funds in exchange for partial ownership of the company. This money can be used to manufacture your invention and

market it. You can also find funding through angel investors, who will give you equity in your company.

You can approach investors by writing a business plan describing your idea. You should include benefits of your invention, why it's superior to other products, survey results, and contacts in the market. You should also explain how you will use the funding to further your idea.
